Admin Page 01 – Business Creation Pipeline (ZERO → HERO)
Design Specification (Production-Ready)

This is the **first (and core) page** of the protected `/admin` section. It serves as the central operational hub where GoGetterOS admins (starting with `nobviz@gmail.com` via Google OAuth) manually guide customer businesses through the full ZERO → HERO pipeline.

The page is deliberately **utility-first**: fast search/filter, one-click new projects, instant detail access, and clear visibility of pricing/retainer gates so admins can instantly see what is required to advance a project.

1. Formalized Pricing & Monetization Model (Cleaned from Your Notes)

I took your exact thoughts and made them professional, marketable, and easy to display in the UI.

Self-Service Tiers (Main User Dashboard – limited to Phases 00–03)

Tier	Monthly Price	Wizard Runs / Month	Token Allowance	Key Benefits
Starter	Free	1 (one-time)	Limited	Basic discovery + 1 MVP
Growth	$99	5	$100/mo	Full Phase 03 + basic ModelRouter
Scale	$499	20	$500/mo	Priority AI + higher limits
Enterprise	$999	Unlimited (rate-limited)	$1,000/mo	Dedicated support + everything

High-Touch / Admin-Led Service (Phases 04–06)

- **Base Retainer**: $10,000 (unlocks Phase 04+ and covers 90 days in staging/sandbox)
- Monthly subscription tier **still required** on top of retainer

- **A-la-carte add-ons** (each ~$8k–$12k, negotiable by scope):
  - Customer Acquisition Engine
  - Open Claw AI Administrator (self-learning harness)
  - Full Infrastructure Package (OAuth, security, multi-zone, etc.)
  - Premium Content & Artifacts Suite (NotebookLM, Broll, infographics)
- **Revenue Share** (gross revenue, GoGetterOS-hosted apps):
  - $0 – $10M lifetime: 35%
  - $10M – $50M: 28%
  - $50M+: 22%
- **Buyout Option**: $150k flat fee to remove revenue share + branding
- **Grandfathered early customers**: 70/30 split until $10k retainer is paid, then drops to 50/50

All of this is displayed as **badges and info panels** in the UI so admins can see the exact financial status of any project at a glance.

2. Page Layout (Built on Existing React 19 + shadcn/ui + Recharts Patterns)

The design directly reuses the visual language already in your codebase (monitoring dashboard, discovery wizard, dark theme).

Top Bar (persistent)

- GoGetterOS logo + “Admin Portal”
- Global search bar (“Search pipeline records…” – searches name, POC, notes, transcripts, etc.)
- Current admin avatar (`nobviz@gmail.com`) with dropdown
- “Switch to Customer View” button

Left Sidebar (collapsible, persistent across all /admin pages)

- Dashboard Overview
- **Business Creation Pipeline (ZERO → HERO)** ← highlighted with rocket icon
- Admin Management
- Voice Assistant Console
- Content Assistant Tools
- Pipeline Analytics / Reports

Main Content Area

- Page header: "Business Creation Pipeline (ZERO → HERO)" + subtitle "Guide leads to autonomous, profitable micro-businesses"
- Prominent **"+ New Project"** primary button (opens Phase 00 intake wizard/modal)
- Filter row (Phase multi-select, Status, POC Email, Referral Source, Assigned Admin, Date Range)
- Default view: **Global List View** (data table – see below)
- Future toggle: Global List View | Kanban Board | Analytics

Data Table Columns (Global List View)

Column	Content / Format	Notes
Business Name	Clickable	Opens detail
POC	Name + email (avatar if available)	—
Current Phase	Colored badge (00 ZERO → 06 HERO)	Color-coded per phase
Started	Date	—
Last Activity	Relative time	—
Revenue Potential	$XXk (estimated)	—
Monthly Tier	$99 / $499 / $999 badge	Self-service tier
Retainer Status	"Paid" / "$10k Due" / "Pending"	Critical gate at Phase 04

Status	Active / Suspended / In Staging / Completed / HERO	Color-coded
Assigned Admin	Avatar + name	—
Actions	Quick buttons	Advance, Voice, Content

Detail View (opens as right slide-over panel or large modal when row is clicked)

- Horizontal **Phase Stepper** (00–06) with progress dots, current phase highlighted, and "Advance Phase" button
- Required checklist before advancing (especially 03 → 04 retainer gate)
- Tabs inside detail panel:
    1. Overview / Notes
    2. Artifacts & Files (Cloudinary integration via `storage.ts`)
    3. Voice Transcripts & Calls (direct link to Voice Assistant Console)
    4. AI Outputs & Research (Phase 02 merged plans)
    5. MVP Preview (Phase 03 live demo link)
    6. Retainer & Agreements (pricing summary + EULA status)
    7. History / Activity Log

This layout matches the realistic UI mockup you attached but is cleaner and includes the new pricing/retainer badges.

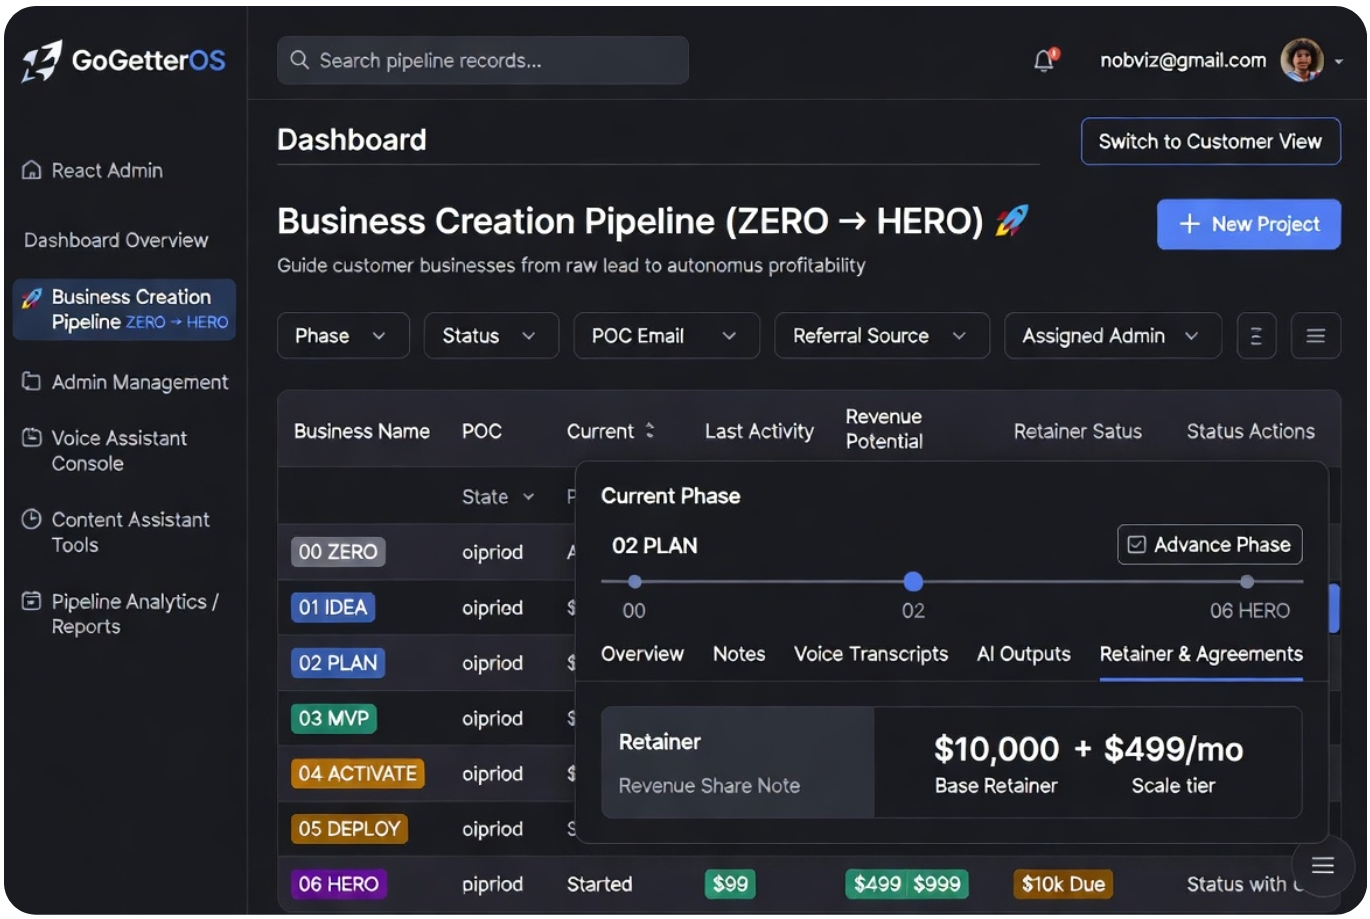
3. Technical Implementation Notes (Fits Existing Codebase Perfectly)

- Uses the new `pipeline_projects` table you already have in the spec.
- Reuses `storage.ts` for Cloudinary uploads (Phase 00 artifacts).
- Leverages existing `modelRouter.ts` + `goGetterAgent.ts` for Phase 02.
- Admins are protected via new `adminProcedure` (already planned).
- Voice Assistant and Content Assistant are tabbed utilities that open the other admin pages or modals (ClawVoice + MediaClaw logic can be imported).

- All data is real-time via tRPC (existing pattern).

Visual Mockup of Page 01

Below is a high-fidelity, production-style mockup of **exactly this first admin page** (Business Creation Pipeline), incorporating your latest pricing model, the phase stepper, detail panel, and all the elements described above. It blends the best aspects of the two reference images you provided while staying true to your existing React + shadcn/ui aesthetic.



This mockup is immediately actionable — you can hand it to a developer (or future Open Claw agent) and they will know exactly what to build.

Would you like me to generate the actual code files next?

- `admin-pipeline.tsx` (the full page component)
- Updated Drizzle schema + migration for `pipeline_projects`
- New tRPC procedures (`adminProcedure` + pipeline CRUD)

- Phase stepper + detail modal components
- Or the full `design.md` update with this page?

Just say the word and I'll output production-ready code that slots perfectly into your existing Vercel + React 19 + tRPC + PostgreSQL stack.
